#### STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. TORRICELLI (for himself and Ms. SNOWE):

S. 819. A bill to amend the Public Health Service Act and Employee Retirement Income Security Act of 1974 to require that group and individual health insurance coverage and group health plans provide coverage for qualified individuals for bone mass measurement (bone density testing) to prevent fractures associated with osteoporosis; to the Committee of Health, Education, Labor, and Pensions.

Mr. TORRICELLI. Mr. President, I rise today to introduce the Early Detection and Prevention of Osteoporosis and Related Bone Diseases Act of 2001 along with my colleague from Maine, Senator SNOWE.

Osteoporosis and other related bone diseases pose a major public health threat. More than 28 million Americans, 80 percent of whom are women, suffer from, or are at risk for, osteoporosis. Between three and four million Americans suffer from related bone diseases like Paget's disease or osteogenesis imperfecta. Today, in the United States, 10 million individuals already have osteoporosis and 18 million more have low bone mass, placing them at increased risk. Osteoporosis is preventable through the use of new technology, yet the majority of Americans with the disease remain undiagnosed and untreated.

Osteoporosis is often called the "silent disease" because bone loss occurs without symptoms. Often people do not know they have osteoporosis until their bones become so weak that a sudden bump or fall causes a fracture or a vertebrae to collapse. Every year, there are 1.5 million bone fractures caused by osteoporosis. Half of all women, and one-eighth of all men, age 50 or older, will suffer a bone fracture due to osteoporosis.

The consequences of osteoporosis are often unrecognized. In New Jersey, in-

dividuals hospitalized with osteoporosis fractures average 9.3 days in the hospital for hip fracture and 71 days for vertebral fracture. National statistics show that 10 to 20 percent of people with hip fracture either die within six months, cannot walk without aid or require long-term care. Education is needed to encourage individuals and their providers to diagnose osteoporosis early and treat the disease swiftly, preventing costly and debilitating fractures.

Osteoporosis is a progressive condition that has no known cure; thus, prevention and treatment are key. The Early Detection and Prevention of Osteoporosis and Related Bone Diseases Act of 2001 seeks to combat osteoporosis, and related bone diseases like Paget's disease by requiring private health plans to cover bone mass measurement tests for qualified individuals who are at risk for developing osteoporosis.

Bone mass measurement is the only reliable method of detecting osteoporosis in its early stages. The test is non-invasive and painless and is predictive of future fractures as high cholesterol or high blood pressure is of heart disease or stroke. This legislation is similar to a provision in the Balanced Budget Act of 1997 that requires Medicare coverage of bone mass measurements.

Medical experts agree that osteoporosis is preventable. Thus, if the toll of osteoporosis and other related bone diseases are to be reduced, the commitment to prevention and treatment must be significantly increased.

The bill is supported by the National Osteoporosis Foundation, American Medical Women's Association, American Society for Bone & Mineral Research, Osteogenesis Imperfecta Foundation, National Association of Orthopedic Nurses, American Physical Therapy Association and the Health Promotion Institute.

I ask unanimous consent the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 819

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

#### SECTION 1. SHORT TITLE; FINDINGS.

(a) SHORT TITLE.—This Act may be cited as the "Early Detection and Prevention of Osteoporosis and Related Bone Diseases Act of 2001".

(b) FINDINGS.—Congress makes the following findings:

##### (1) NATURE OF OSTEOPOROSIS.—

(A) Osteoporosis is a disease characterized by low bone mass and structural deterioration of bone tissue leading to bone fragility and increased susceptibility to fractures of the hip, spine, and wrist.

(B) Osteoporosis has no symptoms and typically remains undiagnosed until a fracture occurs.

(C) Once a fracture occurs, the condition has usually advanced to the stage where the likelihood is high that another fracture will occur.
